

The Rise of Citizen Science: Reptiles

A visualisation of the recorded sightings of reptile species from the six most observed Reptilia families in the ACT, Australia, since 1965. Sightings are grouped vertically into plots by family. The size of the coloured streams represent the amount of sightings of a family sourced from citizen science, government, and museum citations in a given year.

Citation Type

- Citizen Science
- Government
- Museum

Number of Observations

Scincidae (Skinks)

Agamidae (Dragons)

Gekkonidae (Geckos)

Pygopodidae (Legless Lizards)

Elapidae (Elapid Snakes)

Chelidae (Freshwater Turtles)

Year
